TO BE ANSWERED AT THE END OF THE CALL

PROCESS: RATE OF CHANGE CENTRIC

DIFFERENTIATED FROM THE HERD

Macroeconomics and Global Macro Risk Management are two very different fields. We specialize in the latter, incorporating key lessons of behavioral finance such as Prospect Theory and Bayesian Inference into our analysis.

WE FOCUS ON THE SLOPES

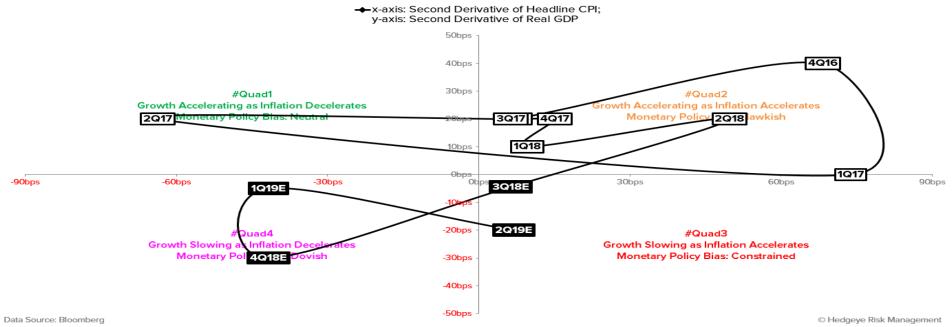

Everything that matters in Global Macro occurs on the margin. Our key differentiator is an ever-present focus on trending rates of change, which helps us front-run changes in sentiment among investor and policymakers – both of whom tend to overweight absolute states in their analysis.

MEASURING AND MAPPING THE CYCLE

SPECIFICALLY, OUR BACKTEST DATA SHOWS THAT A LARGE DEGREE OF INTER AND INTRA ASSET CLASS RETURNS CAN BE EXPLAINED BY CHANGES IN GROWTH, INFLATION AND POLICY RELATIVE TO IMPLIED EXPECTATIONS ACROSS MACRO MARKETS. REFER TO THE FOLLOWING SLIDE FOR MORE DETAILS.

WHY DOES THE 2ND DERIVATIVE MATTER?

BECAUSE FINANCIAL ASSET RETURNS HAVE HISTORICALLY ANCHORED ON MARGINAL RATES OF CHANGE IN BOTH GROWTH AND INFLATION – ESPECIALLY WHEN THESE DELTAS ARE COUNTER TO CONSENSUS EXPECTATIONS.

GIP MODEL RISK MANAGEMENT OVERLAY

#QUAD1

- Maximum gross exposure, tight net exposure. Hedge downside risk to market beta. Growth investing bias.
- Asset Class Overweight(s):
 Equities and Credit
- Asset Class Underweight(s):
 Fixed Income
- Equity Sector Overweight(s): Tech, Consumer Discretionary and Industrials
- Equity Sector Underweight(s):
 Utilities, Consumer Staples and Energy
- Equity Style Factor
 Overweight(s): Momentum,
- High Beta and Growth
- Equity Style Factor
 Underweight(s):
 Low Beta/Minimum Vol., High
 Dividend Yield and Value
- Fixed Income Overweight(s):
 Convertibles, HY Credit and HY Munis
- Fixed Income Underweight(s):
 Short Duration Treasuries, TIPS
 and MBS

#QUAD2

- Maximum gross exposure, wide net exposure. Hedge downside risk to market beta. Inflationhedging bias.
- Asset Class Overweight(s):
 Equities and Credit
- Asset Class Underweight(s):
 Fixed Income
- Equity Sector Overweight(s):
 Tech, Industrials and Consumer
 Discretionary
- Equity Sector Underweights(s):
 Utilities, REITS and Consumer
 Staples
- Equity Style Factor
 Overweight(s): Momentum,
- High Beta and Growth
- Equity Style Factor
 Underweight(s):
 Low Beta/Minimum Vol., High
 Dividend Yield and Value
- Fixed Income Overweight(s): Convertibles, TIPS, HY Credit and IG Credit
- Fixed Income Underweight(s):
 Long Duration Treasuries and Munis

#QUAD3

- Low gross exposures, tight net exposure. Hedge upside risk to market beta. Defensive, yieldchasing bias.
- Asset Class Overweight(s):
 Fixed Income
- Asset Class Underweight(s):
 Equities and Credit
- Equity Sector Overweight(s):
 Utilities, REITS and Energy
- Equity Sector Underweight(s):
 Financials, Materials and
 Consumer Staples
- Equity Style Factor
 Overweight(s):
 Low Beta/Minimum Vol., Growth
 and Quality
- Equity Style Factor
 Underweight(s):
 Value, High Dividend Yield and
 Small Caps
- Fixed Income Overweight(s):
 Long Duration Treasuries,
 Taxable Munis and TIPS
- Fixed Income Underweight(s):
 HY Credit, IG Credit and
 Convertibles

#QUAD4

- Minimum gross exposure, net short exposure. Hedge upside risk to market beta. Deflationhedging bias.
- Asset Class Overweight(s):
 Fixed Income
- Asset Class Underweight(s):
 Equities and Credit
- Equity Sector Overweight(s):
 Healthcare, Consumer Staples
 and REITS
- Equity Sector Underweight(s):
 Tech, Energy and Industrials
- Equity Style Factor
 Overweight(s):
 High Dividend Yield, Low
 Beta/Minimum Vol. and Quality
- Equity Style Factor
 Underweight(s):
 Momentum, High Beta and
 Growth
- Fixed Income Overweight(s):
 Long Duration Treasuries, MBS,
 IG Credit and Taxable Munis
- Fixed Income Underweight(s):
 TIPS, HY Credit and Convertibles

U.S. REAL GDP FORECASTS

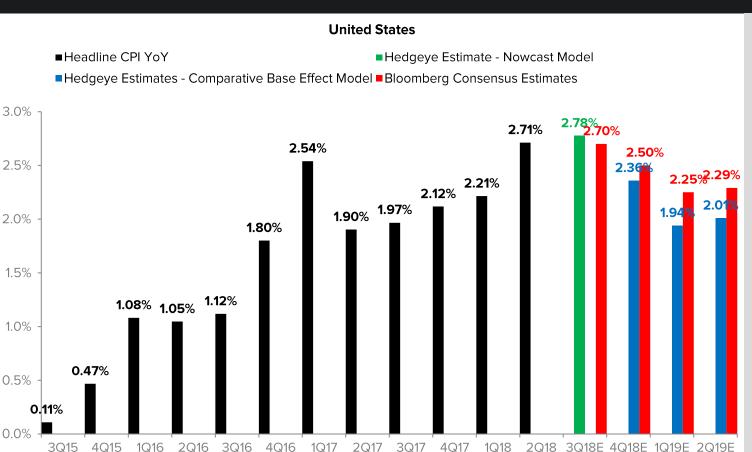

We use two distinct models to forecast the YoY growth rate of real GDP and the combination of the two allows us to develop both a highly accurate realtime view of near-term growth momentum, as well as a highprobability scenario for where growth is likely to trend over the intermediate term.

Intra-quarter, we employ a stochastic nowcasting framework that adjusts the base rate by the cumulative weighted marginal rate of change of the 30 factors embedded in our predictive tracking algorithm. In out-quarters where high-frequency data has yet to be reported, we employ a Bayesian inference process that adjusts each of the preceding forecasted base rates inversely and proportionally to the marginal rates of change in the base effects. The 2Y average growth rate in the comparative base period backtests as having the most forecasting validity.

All in, our U.S. GDP model has an intraquarter tracking error of 28bps, an average absolute forecast error of 20bps and an r-squared of 0.94 with a success rate of 93% in terms of projecting the directional outcome.

U.S. HEADLINE CPI FORECASTS

We use two distinct models to forecast the YoY rate of change in headline CPI and the combination of the two allows us to develop both a highly accurate real-time view of near-term inflation momentum, as well as a highprobability scenario for where inflation is likely to trend over the intermediate term.

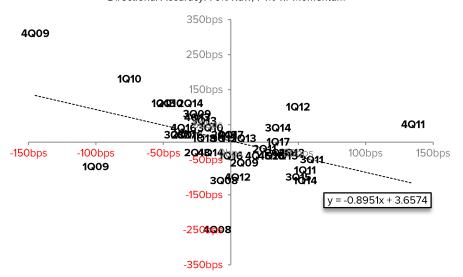

Intra-quarter, we employ a stochastic nowcasting framework that adjusts the base rate by the cumulative weighted marginal rate of change of the various inflation-oriented factors embedded in our predictive tracking algorithm. In out-quarters where high-frequency data has yet to be reported, we employ a Bayesian inference process that adjusts each of the preceding forecasted base rates inversely and proportionally to the marginal rates of change in the base effects. The 2Y average growth rate in the comparative base period backtests as having the most forecasting validity.

All in, our U.S. CPI model has an intraquarter tracking error of 34bps, an average absolute forecast error of 22bps and an r-squared of 0.80 with a success rate of 93% in terms of projecting the directional outcome.

A QUICK LESSON IN BASE EFFECTS

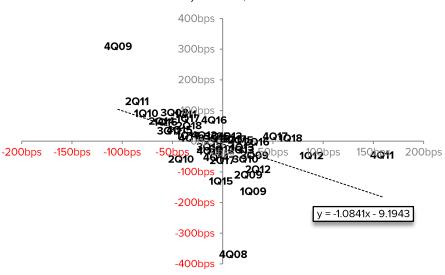

REAL GDP GROWTH Y/Y

x-axis: Marginal Rate of Change of the 2Y Average YoY Real GDP Growth Rate in the Comparative Base Period; y-axis: Marginal Rate of Change of the YoY Real GDP Growth Rate in the Forecast Period (Trailing 10Y) Directional Accuracy: 75% Raw; 74% w/ Momentum

HEADLINE CPI Y/Y

x-axis: Marginal Rate of Change of the 2Y Average YoY Headline CPI Rate in the Comparative Base Period; y-axis: Marginal Rate of Change of the YoY Headline CPI Rate in the Forecast Period (Trailing 10Y) Directional Accuracy: 70% Raw; 79% w/ Momentum

In the U.S. specifically, 75% of the time the marginal rate of change in the 2Y average Real GDP growth rate in the comparative base period carries the **opposite** sign of the marginal rate of change of the growth rate in the forecast period; that same figure is 70% of the time for Headline CPI.

TRADE/TREND/TAIL RISK MANAGEMENT PROCESS

Core to the process of selecting our preferred macro factor exposures is whether or not the ticker screens well from the perspective of Keith's proprietary risk management process, which employs PRICE, VOLUME and VOLATILITY as discrete factors in the calculus of levels that backtest well as critical momentum thresholds.

Assets where last price is greater than all three (in ascending order) are said to be in a "Bullish Formation" and all dips should be bought, insomuch that assets in the converse "Bearish Formation" should be repeatedly shorted on strength.

STYLE & SENTIMENT FACTORING

MONITORING STYLE AND THEMATIC MACRO FACTOR PERFORMANCE ALLOWS US TO QUANTITATIVELY MAP THE EVOLUTION OF OUR CURRENT MACRO THEMES WHILE THE CFTC DATA PROVIDES AN IMPORTANT SENTIMENT BACKBOARD AGAINST WHICH WE CAN MEASURE AND FADE CONSENSUS.

RISK MANAGEMENT: THE VOLATILITY FACTOR

3-FACTOR MODEL: PRICE, VOLUME, VOLATILITY

Price, Volume, **VOLATILITY** **IMPLIED** Volatility (Forward Looking Expectations & Hedging Activity)

REALIZED Volatility (Rearview Market Trends)

Volatility Factors

VOLATILITY SKEW:

Directional Bias and **Hedging Activity**

IMPLIED VOLATILITY PREMIUM: Future

Expectations vs. Rearview **Market Trends**

DISPERSION: Relative Volatility Across Sectors & Factor Exposures

TERM STRUCTURE: Multi-Duration View of Volatility Expectations & Hedging Costs.

KEY GLOBAL MACRO VOLATILITY TRENDS

Q2 2018 MACRO THEMES

USA: #PEAK CYCLE?

After 6 consecutive quarters of accelerating growth and bullish quantitative signaling, our model is mapping a peak and prospective negative inflection in domestic economic growth as we move into 2H18. We'll review and contextualize the recent shift in market and macro dynamics and detail the fundamental, base effect and risk management dynamics driving our expectation for a downshift to Quads 3 and 4 in the back half of the year. We'll specify the risks to the consensus outlook and how to optimize positioning for the chop associated with emergent phase transitions in growth and volatility.

GLOBAL #DIVERGENCES, REITERATED

Cross-asset volatility has conspicuously emerged amid consensus calls for an ongoing "globally synchronized recovery" and an extrapolation of cycle-peak GDP growth rates in the U.S. through year-end. As such, we feel compelled to reiterate our non-consensus view that global growth momentum has broadly dissipated. The only strategist that seems to agree with our view is *Mr. Market* himself.

DOLLAR #BOTTOMING?

We have recently asked the rhetorical question, "Is the [U.S.] dollar the new VIX?" Peak dollar bearishness came midway through Q1 which was driven by carry trades and fund flows associated with the low-volatility, global growth accelerating backdrop of 2017. We'll outline reasons and provide specific set-ups to exemplify why a reversal in the U.S. dollar continues to be a major risk to aging consensus fund flow narratives.

Q3 2018 MACRO THEMES

#STRONGDOLLAR

A U.S. Dollar Index +7% off its YTD lows has already inflicted some major pain in consensus macro views that were observably long of things like commodities and emerging market financial assets heading into Q2. Moreover, our proprietary GIP-modeling process for all of the world's major economies signals that the global trend of decelerating growth is just getting started – an outcome that is likely to increasingly drive inflows into dollar-denominated assets. We will dig into the wide-reaching implications of further USD strength that investors can't afford to miss, from emerging market USD-denominated credit risk to corporate profit deterioration.

#HAVERATESPEAKED?

With a peak in domestic headline inflation pending in Q3, 4 hikes out of the FOMC now priced in for 2018, DM sovereign yields retreating alongside the more discrete manifestation of #GlobalDivergences (i.e. broad slowing across Europe, China and EM) and both 10Y Yields and Ag all signaling lower-highs, the consensus "bond bear market" thesis is likely to find itself under increasing scrutiny as we progress throughout 2H18. We'll review prevailing conditions, detail emerging dynamics and discuss how we'll be risk managing rates and rate-sensitive equity exposure in the upcoming months.

#SHORTEM

The first half of 2018 saw a tremendous pickup in cross-asset volatility – albeit from at/near all-time lows – throughout the emerging market investment universe. With explanations of what caused this market event as numerous as the number of strategists who didn't see it coming *and* as bountiful as those that are calling for it to end purely as a function of "attractive valuations", we don't believe our bearish bias on EM is fully priced in. As such, we will anchor on the findings of our proprietary, repeatable and robust processes to detail to investors why EM assets are likely to continue to be a drag on fund performance with respect to the intermediate term.

GLOBAL GIP MODEL SUMMARY

3Q17 WAS THE LAST QUARTER WHERE GLOBAL GROWTH MOMENTUM WAS BROADLY POSITIVE. FURTHERMORE, OUR MODELS SUGGEST THE "GLOBALLY SYNCHRONIZED RECOVERY" NARRATIVE IS SQUARELY IN THE REAR-VIEW MIRROR.

#QUAD4 IS DOLLAR BULLISH

GLOBAL GIP MODEL BACKTEST

U.S. GIP MODEL BACKTEST

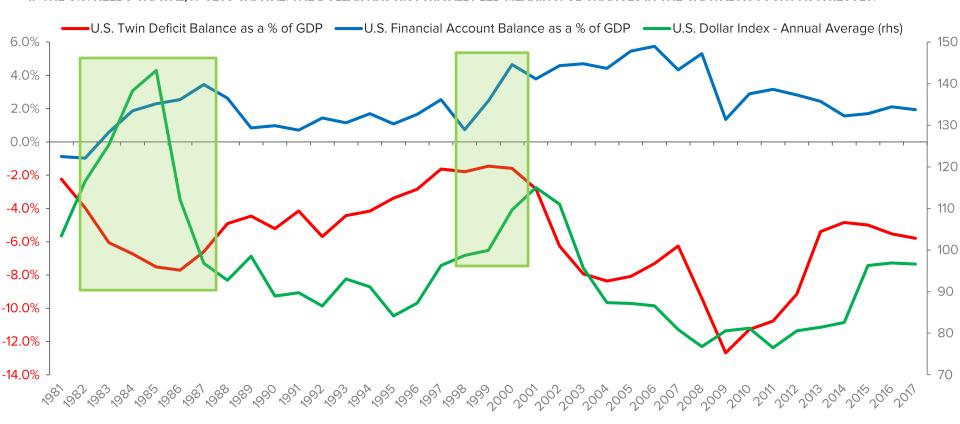

Data Source: Bloomberg, Asset classes include equities, fixed income, currencies and commodities. Trailing 20Y

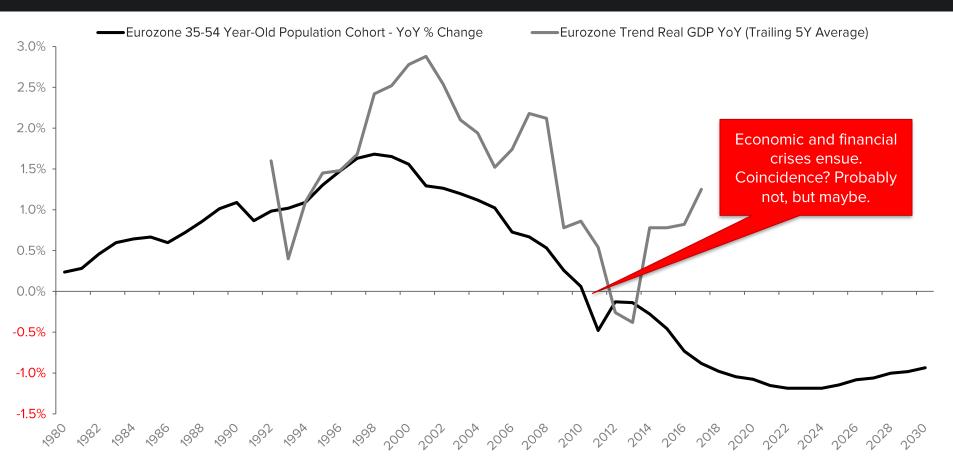

Data Source: Bloomberg. Asset classes include equities, fixed income, currencies and commodities. Trailing 20Y.

EXERCISING EXORBITANT PRIVILEGE

THE U.S. DOLLAR REMAINS THE WORLD'S PRIMARY RESERVE CURRENCY AND U.S. TREASURIES REMAIN THE WORLD'S PRIMARY RESERVE ASSET, WHICH MEANS
IF THE U.S. NEEDS CAPITAL, IT GETS CAPITAL, THE DOLLAR HAS HISTORICALLY LED MEANINGFUL CHANGES IN THE CAPITAL ACCOUNT AS A RESULT.

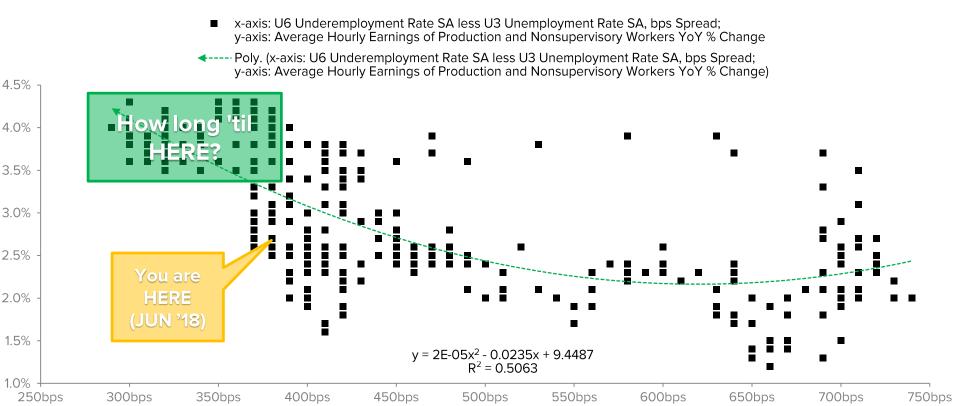

ECONOMIC GRAVITY IN THE EUROZONE

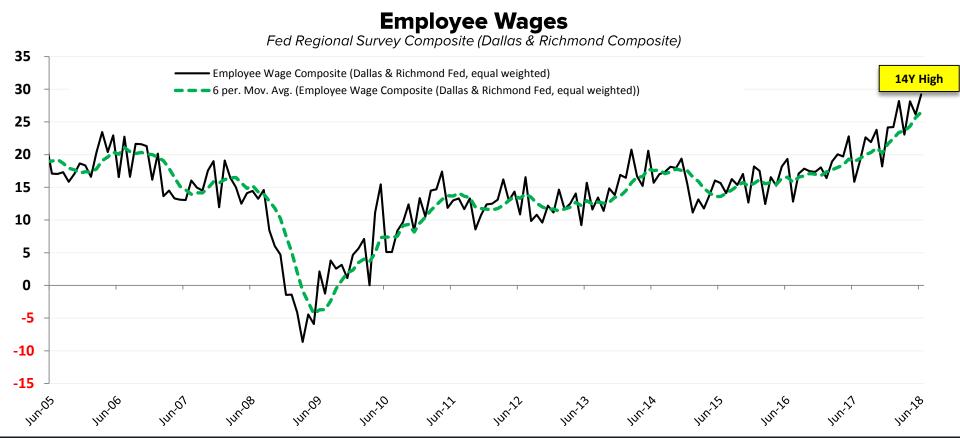

WAGE PRESSURES ARE NON-LINEAR

WAGE GROWTH IS NON-LINEAR AND ALL OF THE HISTORICAL OBSERVATIONS NORTH OF +3.0% Y/Y ARE AT/BEYOND A CRITICAL THRESHOLD FOR TAUTNESS IN THE LABOR MARKET AT THIS STAGE OF THE BUSINESS CYCLE.

MANUFACTURING WAGES = 14Y HIGHS

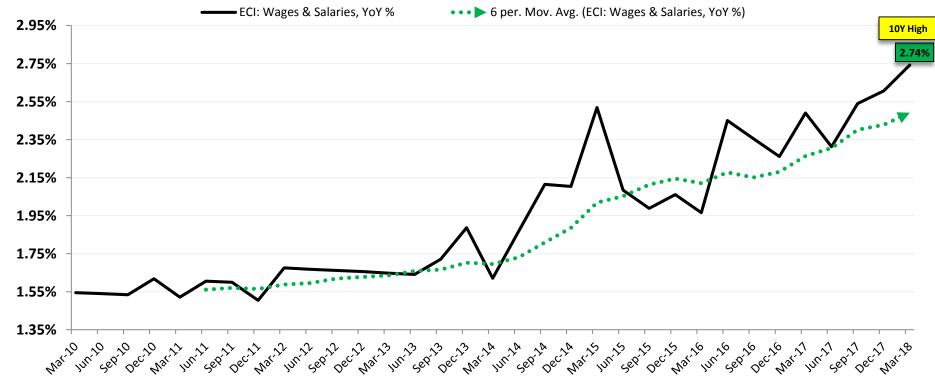

THE EMPLOYEE WAGES SERIES FOR THOSE REPORTING IN THE FED REGIONAL SURVEYS CONTINUE TO MAKE HIGHER CYCLE HIGHS

ECI = CYCLE HIGH ... AND ACCELERATING

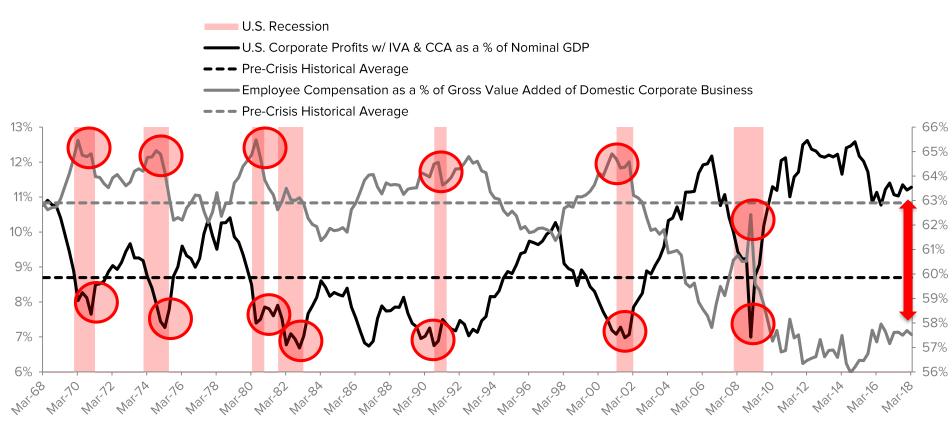

BOTH THE TOTAL COMPENSATION AND WAGES AND SALARIES SERIES IN THE ECI CONTINUE TO ACCELERATE TO NEW HIGHS

Employment Cost Index: Wages & Salaries

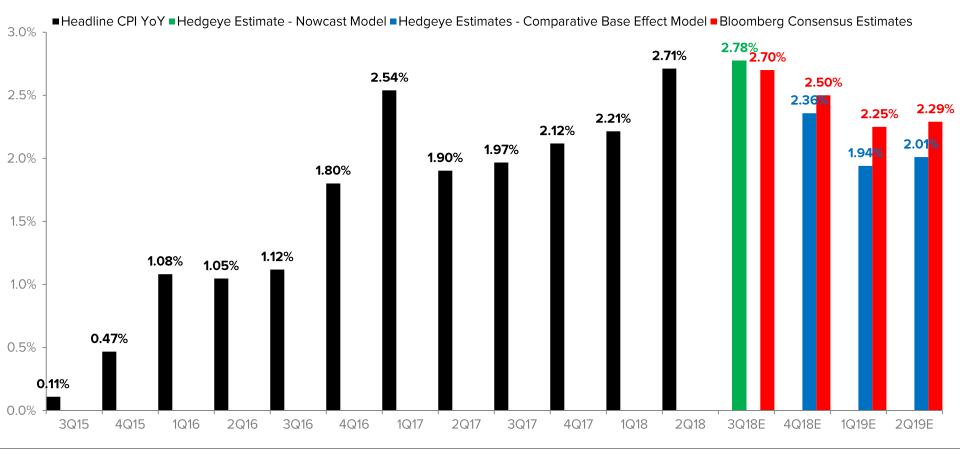

WAGE PRESSURES END EVERY BUSINESS CYCLE

PEAK CORPORATE PROFITABILITY IN THE U.S. IS LIKELY TO COME TO AN END AS UNIT LABOR COSTS RECOVER FROM STRUCTURAL LOWS. ANY IMPAIRMENT IN CORPORATE AMERICA'S ABILITY TO SERVICE DEBT WOULD LIKELY PERPETUATE A REDUCTION IN UNIT LABOR COSTS.

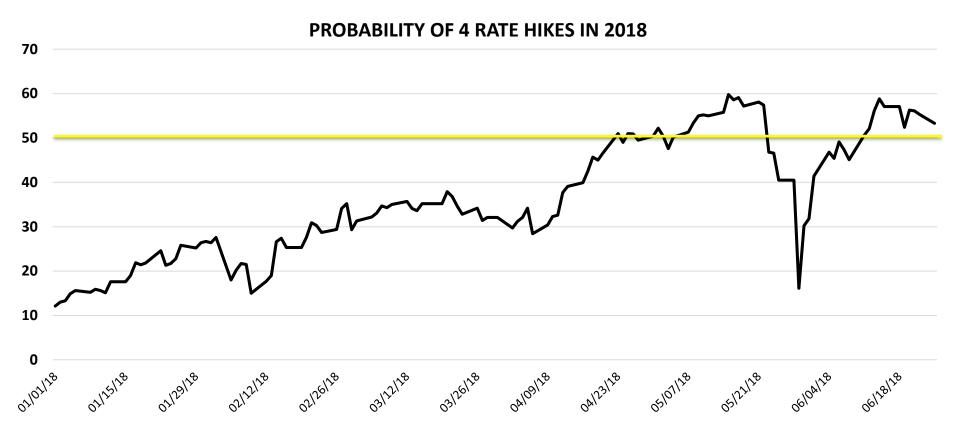

INFLATION: BACK TO SUB-2% BY Q1 2019?

United States

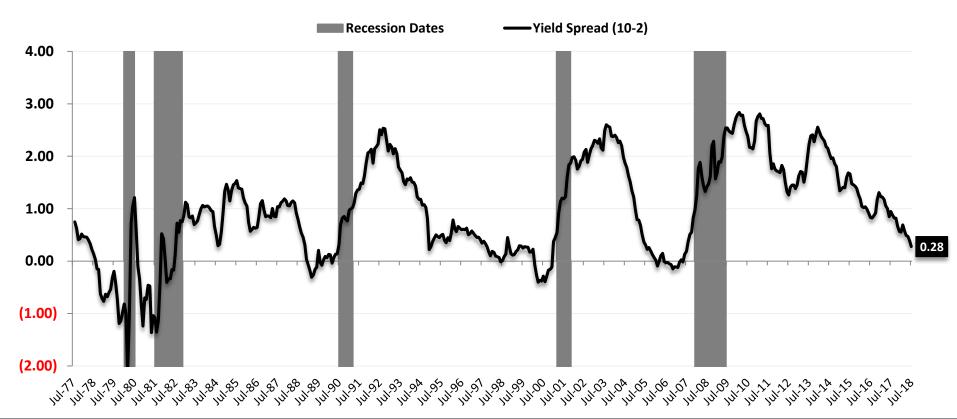

A HAWKISH FED HAS NOW BEEN DISCOUNTED

#INFLATION ACCELERATING AND #GROWTH DIVERGENCES HAVE SLOWLY BEEN PRICED INTO POLICY. LOOKING FORWARD, THE BALANCE OF RISK HAS PROBABLY SHIFTED IS IT MORE LIKELY THAT POLICY EXPECTATIONS REPRICE LOWER ALONGSIDE SLOWING GROWTH AND INFLATION OR THAT THE FED UPGRADES ITS OUTLOOK FOR 5 HIKES IN 2018 & A STEEPER PATH FOR 2019?

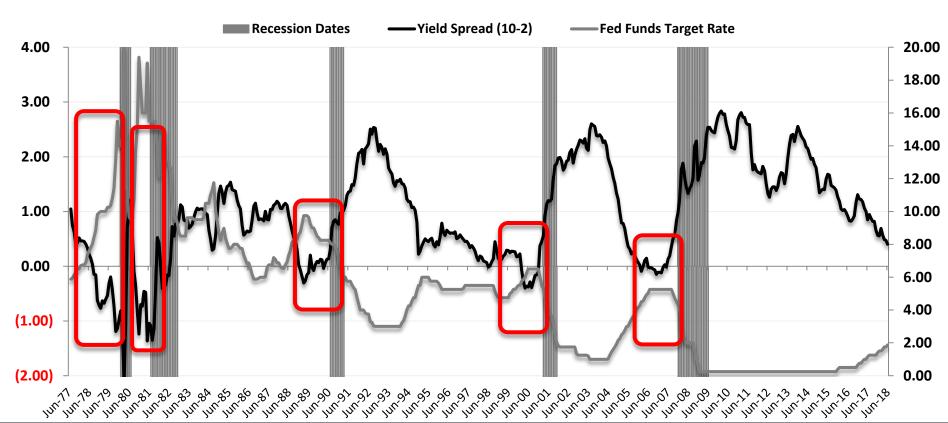

INFLATION EXPECTATIONS + + POLICY TIGHTENING + QUAD 4 = CURVE FLATTENING

IF INFLATION EXPECTATIONS ARE COMING IN ON THE LONG END, REALIZED INFLATION IS SET TO SLOW AND THE FED IS HIKING INTO A PENDING QUAD 4 ENVIRONMENT, DOMESTICALLY & GLOBALLY, CURVE FLATTENING SHOULD REMAIN INTERMINABLE

WE KNOW HOW TIGHTENING ENDS

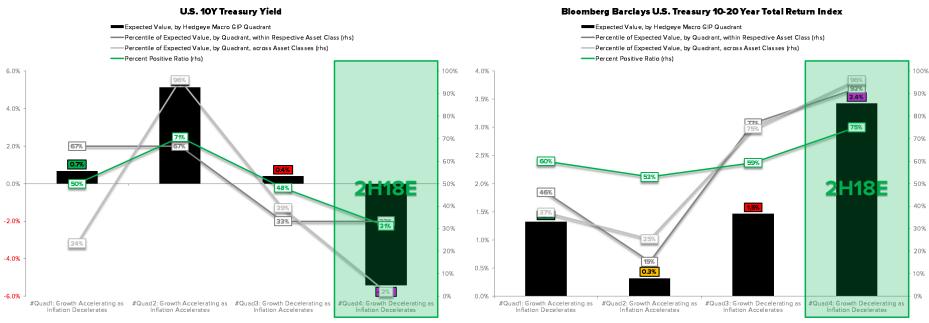

HISTORICALLY, THE FED HAS ALWAYS TIGHTENED UNTIL SOMETHING BLOWS UP (RECESSION, EM, FINANCIAL MARKETS, ETC.)

CONCLUSION: #QUAD4 ≠ RISING RATES

U.S. GIP MODEL BACKTEST: 10Y TREASURY YIELD

U.S. GIP MODEL BACKTEST: LONG BOND TOTAL RETURN INDEX
