THE MACRO SHOW

What happens when "volatility" (in this case, front month VIX) goes from 16 to 11 in less than a week? Most bears capitulate. So, after the move, the S&P 500 implied volatility premium (vs. 30-day realized) just got smashed from +108% to +5% and the Russell's implied volatility premium is at -7% DISCOUNT! #BookGains

COMMODITIES

Reflation's Rollover (Q2 Macro Theme @Hedgeye) had another good day yesterday with the CRB Index closing DOWN -0.5% in a raging bull equity tape. That takes the trending (6 months) return for the CRB Index to -4.7% vs. the Nasdaq and Financials (XLF) 6 month returns of +13.8% and +21.5%, respectively.

THE "R" IS FOR

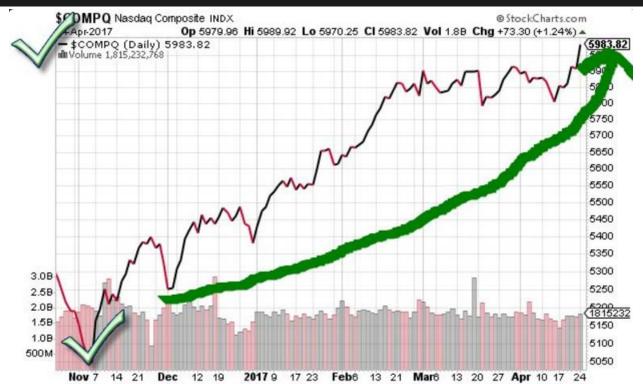

EFLATION.

U.S. DOLLAR

We are obviously not going to send you many actionable buy signals in U.S. Equities after the move, but U.S. currency is a great spot to pivot this morning with the EUR/USD testing @Hedgeye TREND resistance of \$1.09. There are plenty of U.S. **#GrowthAccelerating** catalysts for USD as both real GDP and U.S. profit growth continue to accelerate.
