EMERGING
MARKETS

3

GOLD

1 #QUAD3

This is how you A) front-run the Fed (since July) and B) make a #QuadShift: Quad4 → Dovish Policy → \$USD ↓ → things priced in \$'s ↑. #Quad3s tend to follow #Quad4s and we're officially going where Macro Markets are on that score this morning. You'll "see" the INFLATION #accelerating in your accounts before the Fed "sees" INFLATION re-accelerating in NOV/DEC

2 Emerging Markets

EM loves it when the Fed devalues the US Dollar (and the purchasing power of The American People), so we'll go 4 for 4 on our Core EM Asset Allocations this morning with India (INDA & SMIN) making another ATH, South Africa (EZA) +1.4%, Indonesia (IDX) +1.0%, and Malaysia (EWM) +0.3%

3 GOLD

I'm old enough to remember when I was long Gold in 2011 as Bernanke was devaluing the US Dollar to a 40yr low (and not holding his Fed accountable for that!) - those were the OG ATHs (all-time highs) for Gold. Today's ATHs are nicer (because my Pile is much larger) and a clean-cut signal of pending #Quad3 US Stagflation in Q4 of 2024

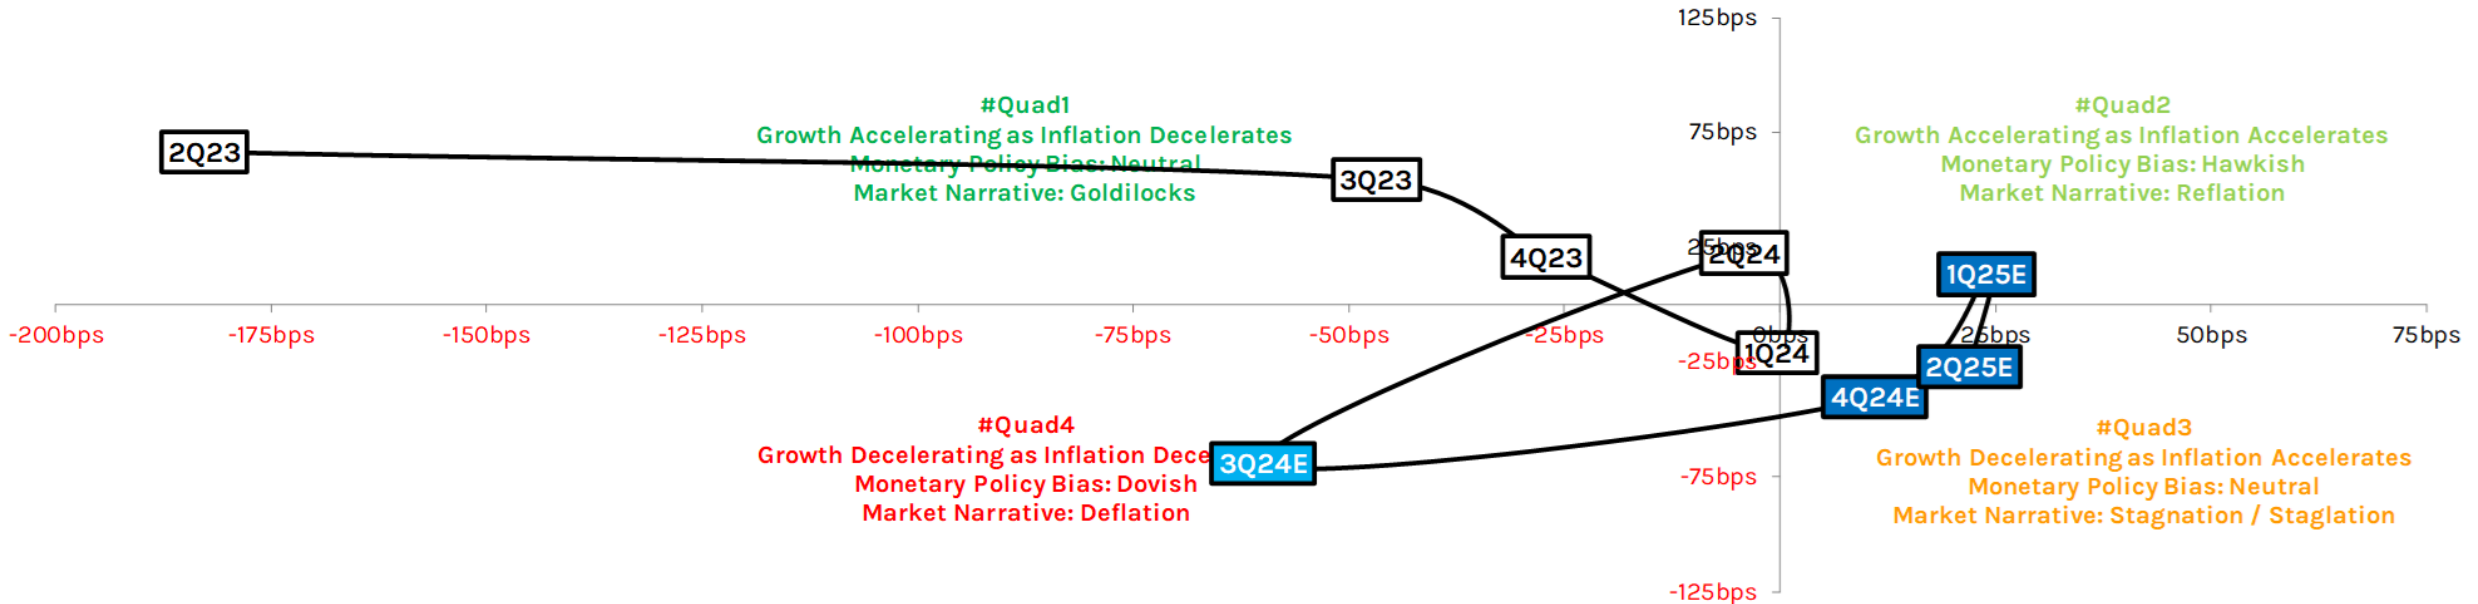

OUR PROCESS

What Are The Quads?

Our GIP Model is a quantitatively oriented, regime-based framework that helps investors proactively prepare for volatility phase transitions within and across asset classes by triangulating the three factors that matter most to Macro Risk Management – i.e. GROWTH, INFLATION, and POLICY.

- Establish minimum position size for each asset class
- **Multiple positions within an asset class (ex. Bullish on four different Fixed Income assets, meaning at max could be 40% of capital)**

- Same basic principles as “Dynamic Asset Allocation” with...
- Long positions should always be larger than shorts
- Dynamics of Macro vs. Earnings Season (outside of Earnings season the sector & factor exposures determined by the Macro environment matter more than your long-term fundamental call on a company)
